

Transform your students' online world language experience!

Learning Site®

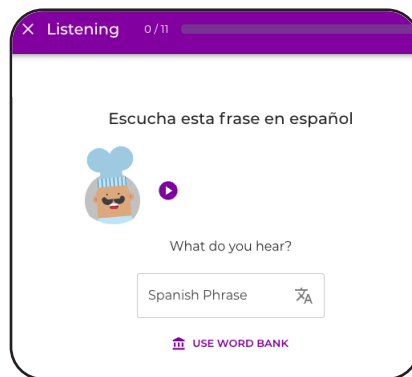

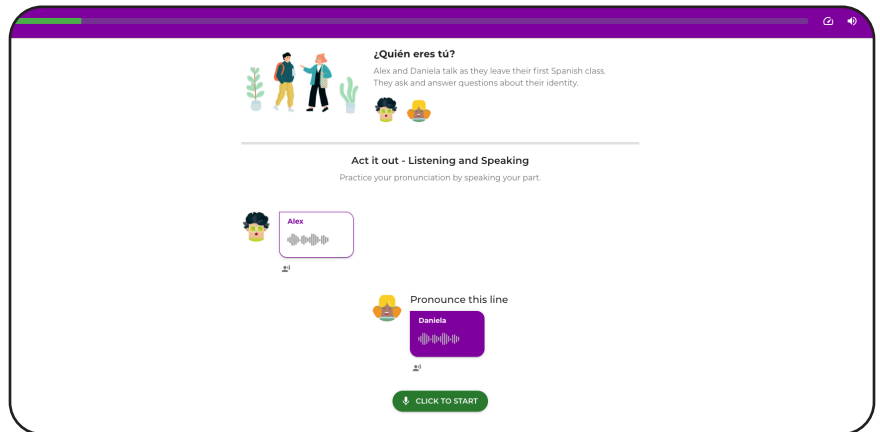

nualang

Translation, Listening, Pronunciation, Roleplays, Chatbots, Student to Student Talking and Gamification are all part of our rich Nualang environment

Nualang is now part of Wayside's Learning site, offering an environment where language learners can utilize cutting-edge technology to refine their foreign language skills.

Book character chatbots ready to talk

A role-play dialogue contains key information from the chapter. Main characters recreate scenes, and students have the chance to engage with the dialogue in a variety of ways, solidifying their ability to work with the key ideas.

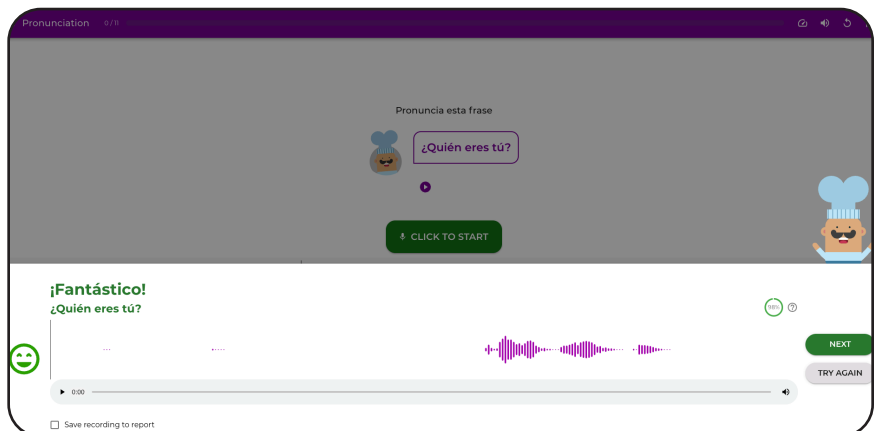

Enhanced language listening, speaking and pronunciation practice

Students practice key words and phrases related to each chapter, getting immediate feedback on listening skills, speaking skills and pronunciation.

One-on-one support

Our Nuala chatbots are keen to chat with students. Some Nualas have built-in lessons, while others are an open canvas, ready for you to create your own lessons and conversations. And the individualized support and instant feedback from Nualas ensure students' skills develop, even with limited teacher time.

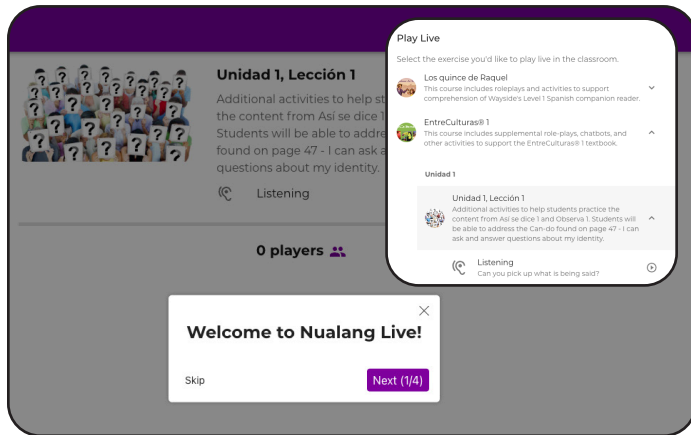

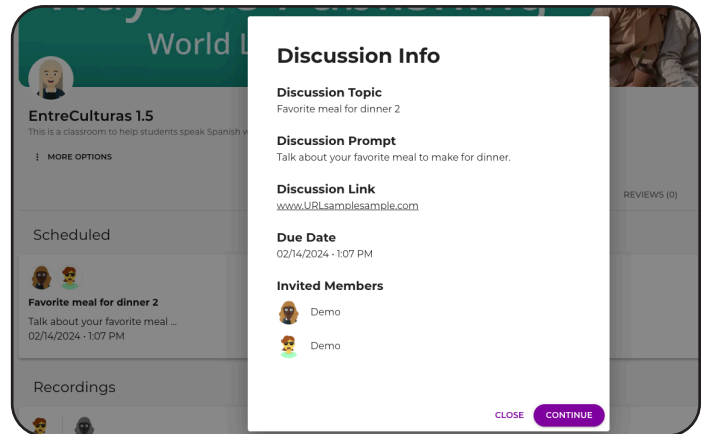

Learning Site®

+ nualang

NEW! Interpersonal speaking feature

The interpersonal speaking feature is called **Discuss** and is available for Spanish level 1, companion reader edition students. It is designed to allow two-four students to engage in a live video discussion together, based on a discussion prompt that their teacher assigns to them. Once the discussion is completed and submitted to the teacher, the teacher can either evaluate the discussion themselves or they can request that **Discuss** assesses it for them.

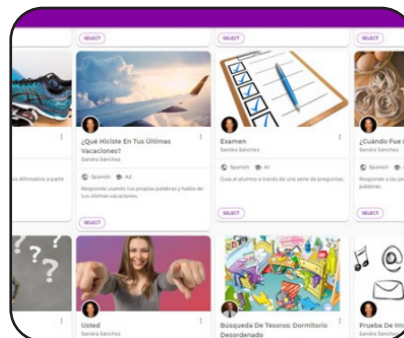

NEW! Interactive game-based activities

Teachers can leverage the game-based feature to enhance language learning engagement and dynamically assess students' comprehension in a fun interactive manner. Students develop their language skills and make advancements in a supportive and low-pressure setting, alleviating any apprehension related to learning a foreign language.

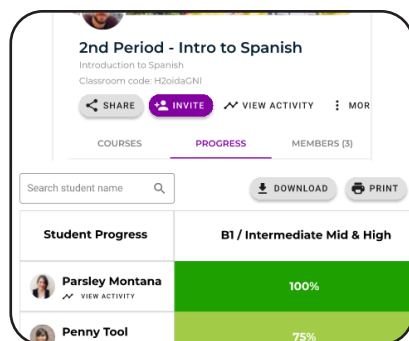

Insightful reports

Students can save their answers to open-ended activities, allowing teachers to gain helpful insights from individual student analysis and classroom heat maps that show how the class is doing as a whole.

Easily creatable custom lessons

Customize language learning based on your needs and preferences. Utilize adaptable, auto-generated content, including roleplay exercises and chatbot conversations to get your students talking about the things they love and give them instant feedback as they practice.

Discover the teacher-created lessons library

Access lessons crafted by educators and chatbot tools to captivate your students. Quickly adapt and enhance these lessons to align with your students' interests. You can choose to keep your courses private or share them with teachers.
